

First day

Brayman Construction. Calibrayt. 7 October 2026.

Use the Mac office Joel has started. Open <http://127.0.0.1:5000> and sign in. Do not use the website.

1. Add the customer under Clients if they are not there yet.
2. Home. + Start New Project. Name and client are required.
3. On the project, Review location. Street, municipality, and province.
4. Documents. Upload the plan PDF you already have. The permit report is not a permit.
5. New estimate. Add the lines you know. Do not invent the rest.
6. On an approved take-off package, Map to estimate, then Insert into estimate.
7. Costing review. Clear any block. Type your own name. Approve all costing.
8. Apply org pricing policy.
9. Create Proposal. Download PDF. Title is CONSTRUCTION ESTIMATE. Read it before it leaves the office.
10. Contract. If it says Production contract unavailable, stop. Family 05 is not the contract.
11. Supplier Estimate Request only when the material list and the supplier are selected. Prices stay blank. The supplier does not approve Brayman's cost.
12. Field. Confirm the project, then Capture. Check Field Observations.
13. Money. Enter an actual cost only when you know the amount.

If something looks wrong, stop and call Joel Brayman. Do not delete the project. Do not rename the office file.

Joel runs the backup sheet before this project is typed in.
